## Conventions

1. Greek index (e.g.  $\alpha, \beta, \mu, \nu$ ) take value from  $\{0, 1, 2, 3\}$ .
2. Events denoted by cursive capitals (e.g.  $\mathcal{A}, \mathcal{B}, \mathcal{E}$ ).
3.  $(x^0, x^1, x^2, x^3) \equiv (t, x, y, z) \equiv x^\alpha$
4. Latin index (e.g.  $i, j, k$ ) take value from  $\{1, 2, 3\}$ .
5. New unit that speed of light  $c = 1$
6. Einstein summation convention  $ds^2 = g_{\mu\nu}x^\mu x^\nu = \sum_{\mu=0}^3 \sum_{\nu=0}^3 g_{\mu\nu}x^\mu x^\nu$

# 1 Differential Geometry

## 1.1 Connection

*Proof.* Here is a proof shows that connection not a tensor by show connection does not obey tensor transformation law.

$$\begin{aligned}\nabla_{\beta'} e_{\alpha'} &= \Gamma_{\alpha'\beta'}^{\gamma'} e_{\gamma'} \\ &= \frac{\partial x^\lambda}{\partial x^{\beta'}} \nabla_\lambda \left( \frac{\partial x^\mu}{\partial x^{\alpha'}} e_\mu \right) \\ &= \frac{\partial x^\lambda}{\partial x^{\beta'}} \left( \frac{\partial}{\partial x^\lambda} \frac{\partial x^\mu}{\partial x^{\alpha'}} e_\mu + \frac{\partial x^\mu}{\partial x^{\alpha'}} \Gamma_{\mu\lambda}^\gamma e_\gamma \right) \\ &= \frac{\partial x^\lambda}{\partial x^{\beta'}} \frac{\partial}{\partial x^\lambda} \frac{\partial x^\mu}{\partial x^{\alpha'}} e_\mu + \frac{\partial x^\lambda}{\partial x^{\beta'}} \frac{\partial x^\mu}{\partial x^{\alpha'}} \Gamma_{\mu\lambda}^\gamma e_\gamma \\ &= \frac{\partial x^\lambda}{\partial x^{\beta'}} \frac{\partial}{\partial x^\lambda} \frac{\partial x^\mu}{\partial x^{\alpha'}} \frac{\partial x^{\gamma'}}{\partial x^\mu} e_{\gamma'} + \frac{\partial x^\lambda}{\partial x^{\beta'}} \frac{\partial x^\mu}{\partial x^{\alpha'}} \frac{\partial x^{\gamma'}}{\partial x^\gamma} \Gamma_{\mu\lambda}^\gamma e_{\gamma'}\end{aligned}$$

which yield

$$\Gamma_{\alpha'\beta'}^{\gamma'} = \frac{\partial x^\lambda}{\partial x^{\beta'}} \frac{\partial}{\partial x^\lambda} \frac{\partial x^\mu}{\partial x^{\alpha'}} \frac{\partial x^{\gamma'}}{\partial x^\mu} + \frac{\partial x^\lambda}{\partial x^{\beta'}} \frac{\partial x^\mu}{\partial x^{\alpha'}} \frac{\partial x^{\gamma'}}{\partial x^\gamma} \Gamma_{\mu\lambda}^\gamma$$

There is an extra term in transformation of connection, so connection is not a tensor. □

## 1.2 Geodesics

## 1.3 Riemann Tensor

# 2 Gravitation

# A Special Relativity

## A.1 Spacetime

### Definition A.1. Inertial coordinate

The coordinate system must satisfy three property to be consider inertial coordinat:

1. The distance between two points are independent of time.
2. The clocks at every points ticking off time coordinate  $t$  at same rate.
3. The geometry of space is always Euclidean (flat).

Figure 1: two events with coordinate  $(-1, -1, 0, 0)$  and  $(4, 3, 0, 0)$ . Orange line is light's worldline.

The event in 4-D spacetime is defined by a set of coordinate  $(t, x, y, z)$ . For simplicity, we assume those events have  $y = 0, z = 0$  so that we can draw a 2D graph to represent them.

Analog to Euclidean geometry, just like the euclidean distance  $\Delta l^2 = \Delta x^2 + \Delta y^2 + \Delta z^2$ , we define the **spacetime interval**  $\Delta s^2 = -\Delta t^2 + \Delta x^2 + \Delta y^2 + \Delta z^2$ .

**Remark.** There are a lot different conventions to define the sign of interval, here we just use the popular one  $(-, +, +, +)$ .

### Example.

Interval for the two events in Figure 1 is  $\Delta s^2 = -\Delta t^2 + \Delta x^2 + \Delta y^2 + \Delta z^2 = -9$ .

The universality speed of light means that  $\frac{\Delta r}{\Delta t} = \frac{\sqrt{\Delta x^2 + \Delta y^2 + \Delta z^2}}{\Delta t} = 1$  are always hold, then we can then write the interval  $\Delta s^2 = -\Delta t^2 + \Delta x^2 + \Delta y^2 + \Delta z^2 = 0$ . This experimental fact yield all law of special relativity.

When the interval  $\Delta s^2$  is less than 0, we call the sepration bewteen events is **timelike**; When the interval  $\Delta s^2$  is equal to 0, we call it **lightlike** or null; When the interval  $\Delta s^2$  is greater than 0, we call it **spacelike**.

**A.2 Tensor**

**A.3 Energy and Momentum**

**B Topological Space**

**C Manifolds**
